Product Features

V3201 is a PC-sharing device that allows 2 users to share one computer. With user priority principle, the V3201 automatically switches to a console when either user starts to operate the keyboard and mouse. This device provides a perfect solution for one pc shared by 2 users easily without LAN or other devices.

1. 2 consoles access 1 PC.
2. Easily plug & play operation - no tools required, & just plug in the cables.
3. VGA, SVGA, & Multi-sync monitor support.
4. Suitable for standard PS/2 computers, or USB computer via a USB adapter.
5. Dual console operation – you can put different types of mouse on in operation.
6. PC port can connect to other KVM switches
7. In idling status, it follows the policy of “First come, first served.”
8. While stopped operating after 1.5 seconds, V3201 is in idling status.
9. No power supply required. (Power-free operation)
10. No software is required.

KVM Function:

1. While 2 green LEDs both turn on in the front panel, it means “ready” and indicates “idling status” (follows the policy of “First come, first served”.)
2. While hot-plugging this device to PC/Server, please FIRST connect Keyboard, Mouse and Monitor with 15pin cable to PC/Server, and then connect this device. If not, the mouse may not work.
3. If keyboard or mouse doesn't work, please use a paper clip to press “Reset” in the front panel to make this device reset.
4. When PC turns on, this device will detect DDC information from the monitor of Console A. If Console A doesn't connect any monitor, it won't be detected.

Packing

1. V3201 KVM unit x 1
2. User Manual x 1
3. KVM cable (EZ-CBM180) x 1
4. Foot Pad x 1 set
